

learning system that and their vocabulary.

computer-assisted study program as it is for a traditional instructional class geared to strengthening speaking and listening skills.

The Symphony System offers versatility, expandability and a broad price range. Add the options of convenient software including the Conductor™ Companion Software, the Soloist™ Digital PC Comparative Recorder Software and the Vocalist™ Digital PC Comparative Recorder Software and it provides a modular learning system that can grow and evolve as your needs change.

Best yet, the Symphony System integrates easily into almost any PC network, operates in a digital or analog format and delivers superb sound quality. For a powerful, cost-effective system that expands your classroom as well as their vocabulary, the Symphony System knows no boundaries.

SONY

Introducing the language expands your classroom—

The Sony Symphony® Learning System takes language learning beyond the realm of the classroom with a unique combination of products and features that make the learning experience more accessible, flexible and enjoyable. The Symphony System's approach combines audio-interactive instruction, computer integration and internet capabilities to enable students to learn the language as well as the culture. Not only can you bring the "world" closer to your students, you can also make the world their classroom.

As a leader in the convergence of audio and video technologies, Sony has taken the power of multimedia and given it the flexibility to work effectively in a wide variety of environments. The Symphony System is as well suited to providing support for a

Learning
System

Make the world their classroom.

SYMPHONY
Learning
System

We Speak Your Language™

Superb sound quality may be the primary reason this system was named “Symphony”, but it’s only one of the harmonious features of the Symphony Learning

System. Its functionality makes it easy to integrate audio-visual materials

Symphony Learning System

A flexible, open, interactive learning system offering a choice of digital and/or analog formats.

which enhance lessons and encourage student participation. The Symphony System stimulates an open, productive, dynamic classroom, giving the instructor the flexibility to communicate with up to sixty-four students individually, in teams or pairs or as an entire class. To enable instructors to more efficiently monitor individual student progress, the Symphony System includes all the desirable real-time audio functions including Monitoring, Intercom, Modeling, All/Group Call, and Random Pairing/Conferencing. The ability to add PCs and gain internet access brings added dimension to language learning.

The perfect accompaniment to the Symphony Learning System is the Conductor Companion Software, a simple, powerful, graphic user interface that makes the Symphony System even more powerful and transports the instructor to conductor. The Conductor Software provides an on-screen graphical representation of the classroom layout and the Symphony System’s operation panel, allowing the instructor to easily control the system from a desktop PC. A great advantage for teachers is the flexibility

Conductor Companion Software

A visual based instruction tool to enhance class organization, record keeping and student monitoring.

to customize and manage classroom activities to fit the course of study and their own style of teaching. In addition to using the Symphony System with cassette tapes, the Conductor Software includes the ability to playback and record digital audio files on the PC – providing the teacher with both analog and digital audio storage/playback capabilities.

The Soloist Digital PC Comparative Recorder is the easy, cost-effective way to take the Symphony System digital and take teacher-driven language learning

Soloist Digital PC Comparative Recorder Software

A digital comparative recorder that takes language learning one step further.

beyond the realm of language lab, allowing students to perform solo outside the classroom. With Soloist Digital PC Comparative Recorders, students can listen to digital audio and video programs while simultaneously recording their own voices, which increases oral and aural proficiency and reinforces listening and speaking objectives. The Soloist Software can be installed onto networked PCs in a shared PC lab, library or dormitory. With Soloist Software installed on a PC outside the lab, students can open an audio file from a shared file server on the PC Network, record their oral responses and copy the file back to the server or e-mail it to the teacher for assessment. This provides students and teachers with greater flexibility in delivering lessons and working on assignments outside the lab.

The Vocalist™ Digital PC Comparative Recorder Software takes language learning to a new place – literally – giving students the ability to access lessons remotely, from home with a PC or from anywhere with a laptop, and e-mail the completed lessons back to the teacher for assessment. Although very similar to Soloist Software in look, feel, features and functionality, the Vocalist Digital PC Comparative Recorder Software is designed

Vocalist Digital PC Comparative Recorder Software

A digital comparative recorder that takes language learning to a new place and time.

specifically for stand-alone use – outside the lab on individual student PCs and laptops. All that’s needed to perform comparative recording outside the language lab is a PC, an inexpensive microphone headset and the Sony Vocalist Software. Since Vocalist Software allows students to practice anytime and anywhere, the obligatory laboratory “free time” allotted for student practice can be reassigned for teacher-guided lessons – providing more efficient use of the lab and allowing more students to gain access.
